

ÇELIKHAN washing and stone washing machines are being manufactured using of state-art technology, perfectly in the technical and aesthetical senses.

- As the drive system operates through a reducer, decreasing in the numbers of belts provides both economy and longer service life for the machines
- The electrical and panel system have two separate models are called digital and electronic.
- The drum sheet thickness enables the maximum extension of drum service life
- Thanks to the inverter that enables a soft start for the engine, impacts within the machine are eliminated and service lives of belts are enhanced by preventing free-running
- The models that can be stepped save time as it enables easy unloading.
- The cover and unloading system operating with air pistons are features that enable safe operation
- The air conditioner installed on control panel for continuous working
